MOTIVATION

Children's Independent Mobility in the urban environment

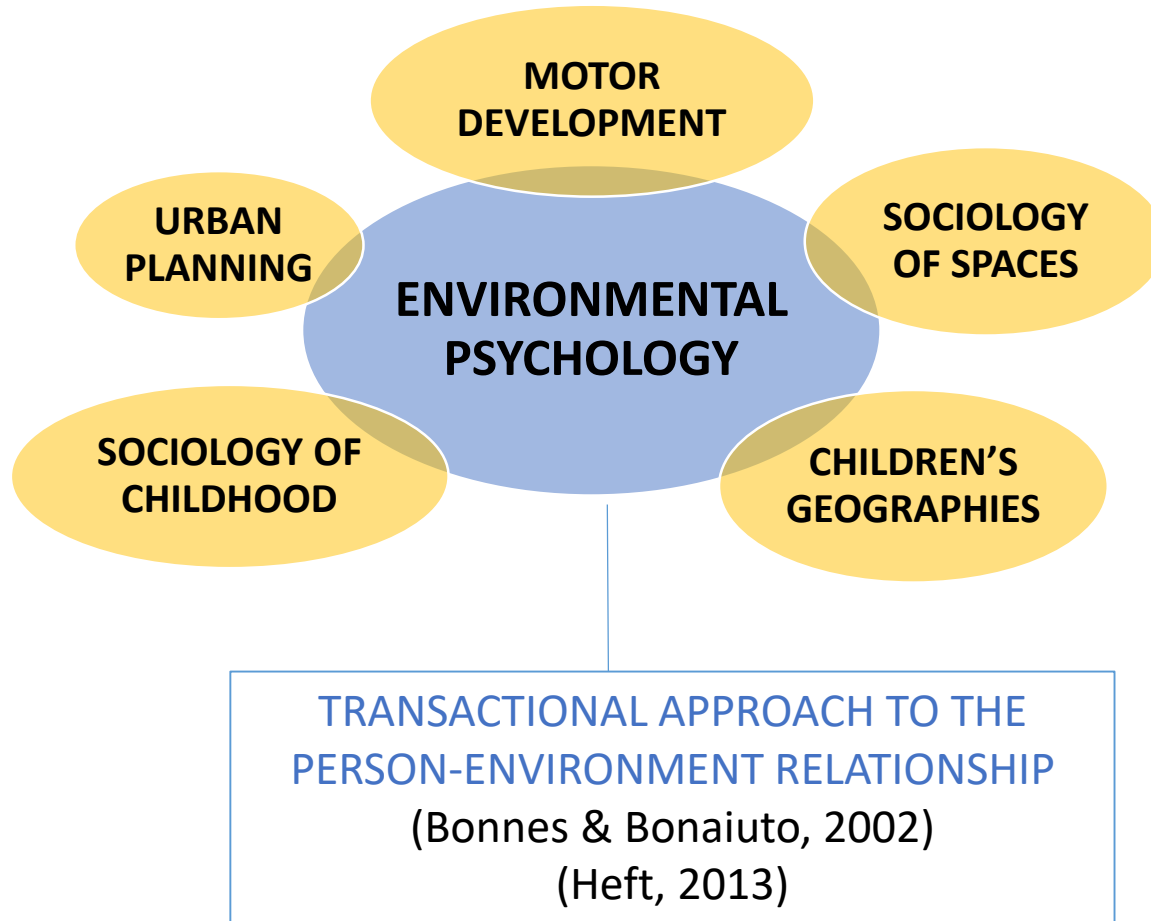

Cordovil, R., Lopes, F., & Neto, C. (2015)

An increase of urbanization degree leads to a general decrease of children's independent mobility.

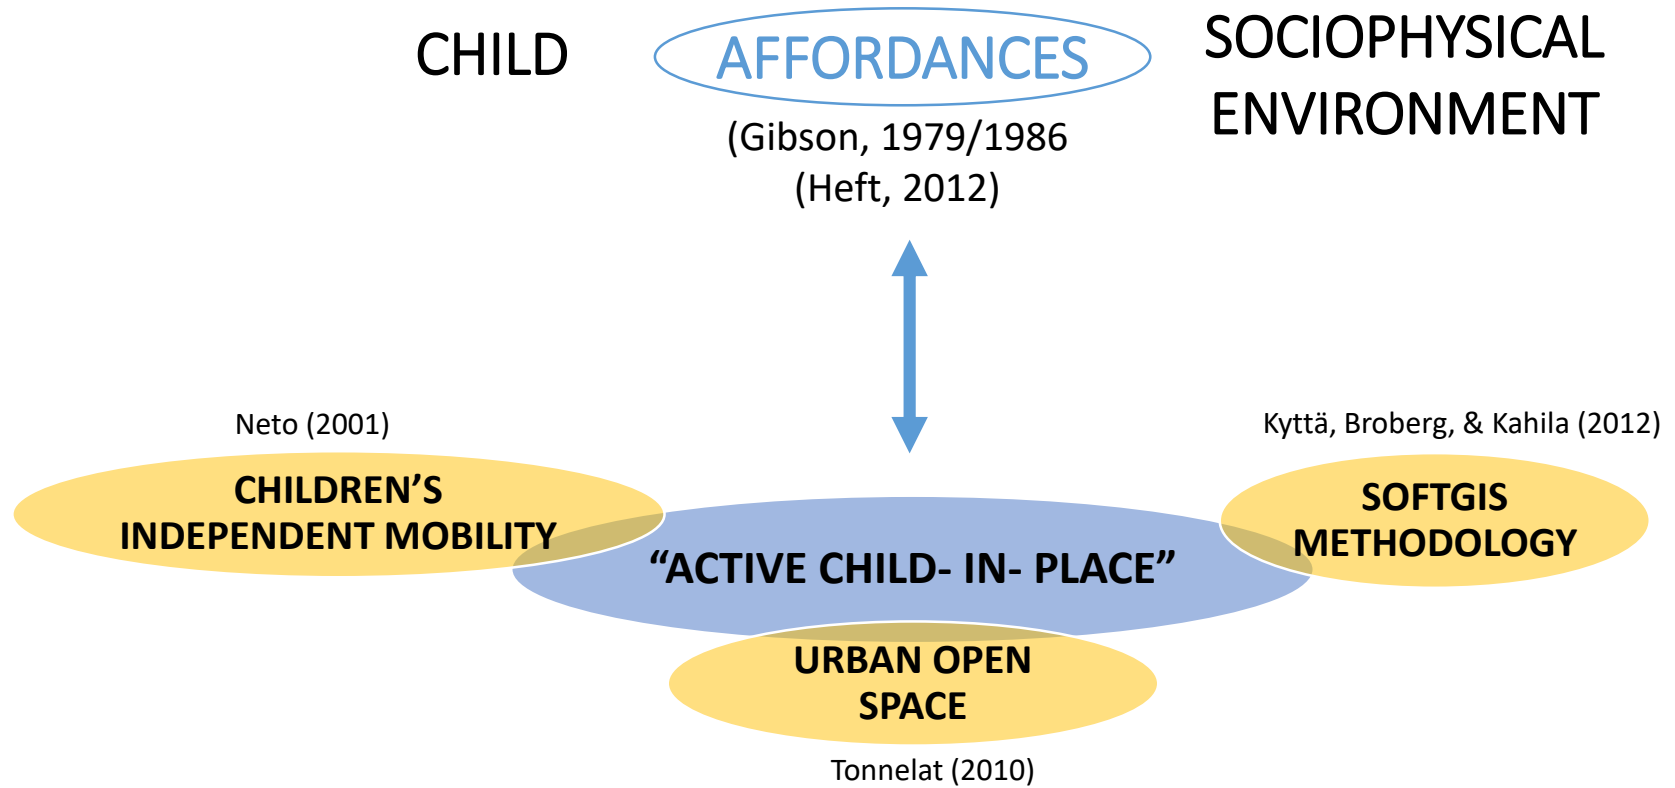

Lopes, F., Cordovil, R., & Neto, C. (2014).

Qualitative research to inform about better practices to tackle this problem, addressing child-environment relationships in a more ecological scope.

THEORETICAL MOSAIC

THEORETICAL MOSAIC

Affordances as specific environmental psychological relational properties that emerge through ongoing “active child-in-place” relationships which are functionally, socially and emotionally meaningful.

MAIN RESEARCH GOAL

<https://www.flickr.com/photos/johnnytsunami/6104692572/>

Data collection, Cidade Ideal

Analysis of the “Child in the City” exploring the relationship between mobility, affordances and urban space, adopting a participatory and child-friendly methodology.

PARTICIPATORY CHILD-FRIENDLY METHODOLOGY

SOFTGIS METHODOLOGY

**collection and place mapping of
human experiences and everyday behavior
in the physical environment
using web-map based technology**

(Rantanen & Kahila, 2009, Kyttä et al. 2012, Brown & Kyttä, 2014)

PARTICIPATORY CHILD-FRIENDLY METHODOLOGY

“Cidade ideal: um jogo de imaginação gráfica!”

(Ideal City: a game of graphic imagination!)

- meaningful places mapping
- place likeability
- daily & ideal mobility to meaningful places
- play and leisure (child vs. adult led)

SOCIAL

alone
conflicts
be with friend
...

FUNCTIONAL

skating
cycling
jumping
...

LEISURE

cinema
library
concerts
...

EMOTIONAL

boring
quiet
safe
...

PARTICIPATORY CHILD-FRIENDLY METHODOLOGY

“Cidade ideal: um jogo de imaginação gráfica!”

jogar à bola

NA MINHA CIDADE REAL:

Esta zona é:

☐ agradável
☐ desagradável

Eu venho para esta zona:

☐ sozinho
☐ com outras crianças
☐ com adultos
☐ com adultos e outras crianças

Eu desloco-me para esta zona:

☐ a pé
☐ de bicicleta
☐ de carro
☐ de transporte público
☐ outro (ex: skate, trotinete, patins)

Esta brincadeira/atividade é:

☒ livre (faço como quero)
☐ organizada (por adultos, ou por organizações)

ESTA ZONA FAZIA PARTE DA MINHA CIDADE ID

☐ SIM
☐ NÃO

NA MINHA CIDADE IDEAL:

Esta zona seria:

☒ agradável
☐ desagradável

Eu gostava de vir para esta zona:

☐ sozinho
☐ com outras crianças
☐ com adultos
☐ com adultos e outras crianças

Eu gostava de me deslocar para esta zona:

☐ a pé
☐ de bicicleta
☐ de carro
☐ de transporte público
☐ outro (ex: skate, trotinete, patins)

Esta brincadeira/atividade seria:

☒ livre (fazia como queria)
☐ organizada (por adultos, ou por organizações)

PARTICIPATORY CHILD-FRIENDLY METHODOLOGY

“Cidade ideal: um jogo de imaginação gráfica!”

CHILD-FRIENDLY

- **relevant content for children’s lives**
- **digital language & computer game usability**
- **children as participant-actors**
- **capture children’s suggestions**
- **articles 12º and 31º of the Convention on the Rights of the Child (UNICEF)**

INDIRECT DATA COLLECTION METHODS

URBAN SPACE TYPOLOGY

(adapted from Brandão, 2008; Francis, 1987; Sandalack & Uribe, 2010)

1. Street.
2. Square.
3. Green space.
4. Exterior play and sports space.
5. Waterfront space.
6. Commercial space.
7. Recreational and leisure space.
8. School.
9. Housing space.
10. Neighbourhood space.
11. Other

PARTICIPANTS AND GEOGRAPHIC CONTEXTS

LBS (LISBON BY SEA)
52 children
(11-14 years old)

LH (LISBON HISTORIC)
40 children
(11-17 years old)

LM (LISBON MODERN)
53 children
(11-15 years old)

L (METROPOLITAN AREA OF LISBON)
145 children (11-17 years old)
6th-9th grade

RESULTS ON MOBILITY TO MEANINGFUL PLACES

ACTUAL MOBILITY TO MEANINGFUL PLACES IN L GROUP

- Active travel and independent travel were more frequently adopted when going to meaningful places.
(Sarjala, Broberg, & Hynynen, 2015)

- Neighbourhood area as promoter of independent and active mobility.
(Fagerholm & Broberg, 2011)

RESULTS ON MEANINGUL PLACE AFFORDANCES

FREQUENCY OF EXPRESSIONAL CATEGORIES OF AFFORDANCES ACROSS RESEARCH GROUPS

% OF AFFORDANCES BY EXPRESSIONAL CATEGORIES

Nº	SOCIAL	LEISURE	FUNCTIONAL	EMOTIONAL
L 1632	35.4	27.7	21.6	15.3
LH 392	36.7	24.2	25.2	13.8
LBS 529	32.5	27.4	26	14
LM 711	36.7	29.8	16.3	17.2

➤ Social affordances as the most expressive.

≠ (Sarjala et al., 2015)

RESULTS ON MEANINGUL PLACE AFFORDANCES

NEIGHBORHOOD AREA AND CATEGORIES OF AFFORDANCES IN L GROUP

- Neighbourhood environment as socially meaningful but not so much functionally, leisurely and emotionally.

(Clark & Uzzell, 2002)

RESULTS ON MEANINGFUL PLACE AFFORDANCES

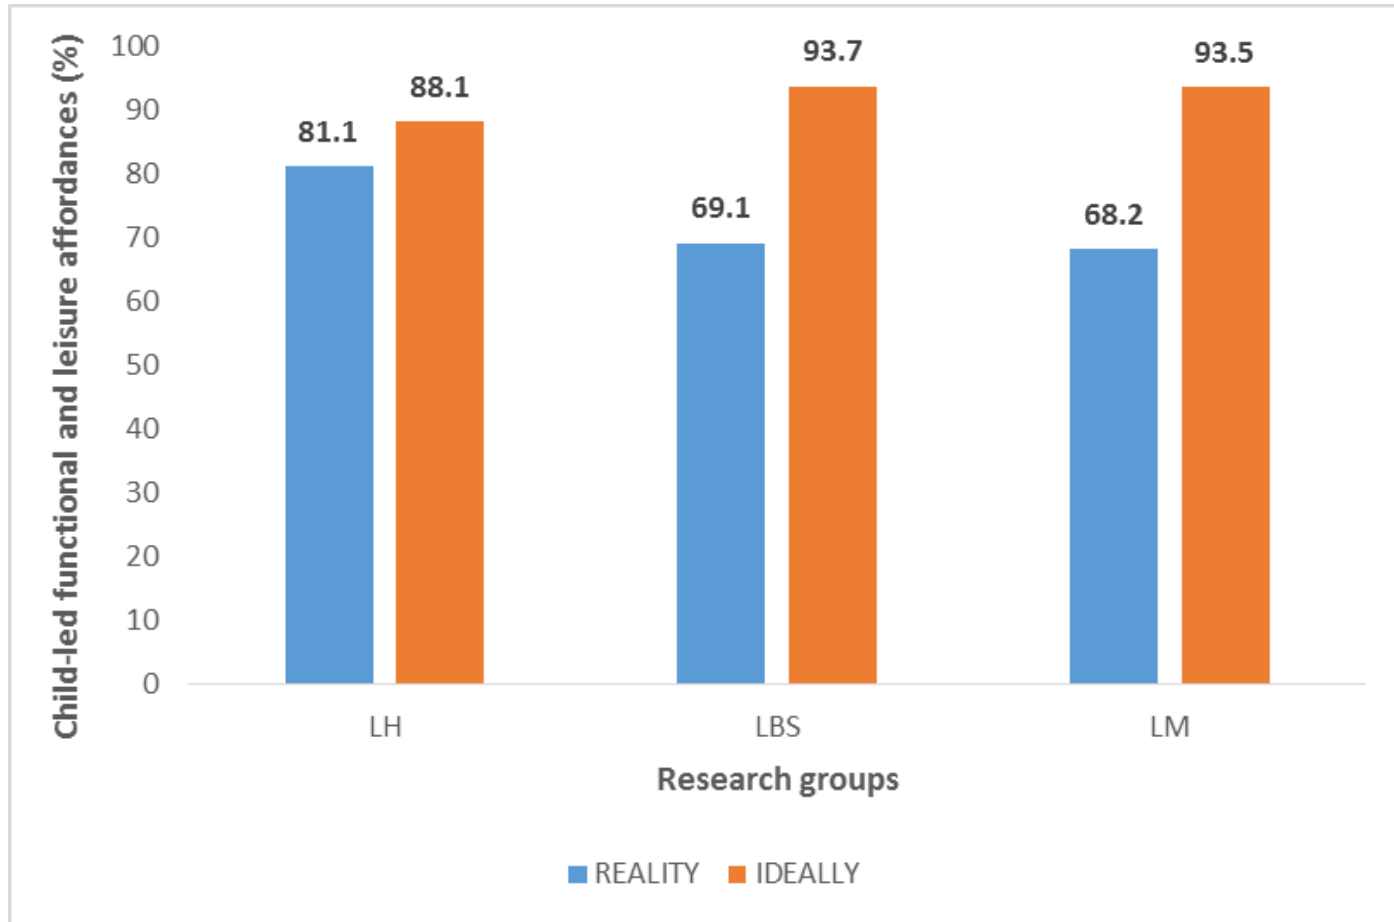

- being with friends
- being myself

(Kyttä et al., 2012)

**ACTUALIZATION
OF SOCIAL
AFFORDANCES IN
LH, LBS AND LM**

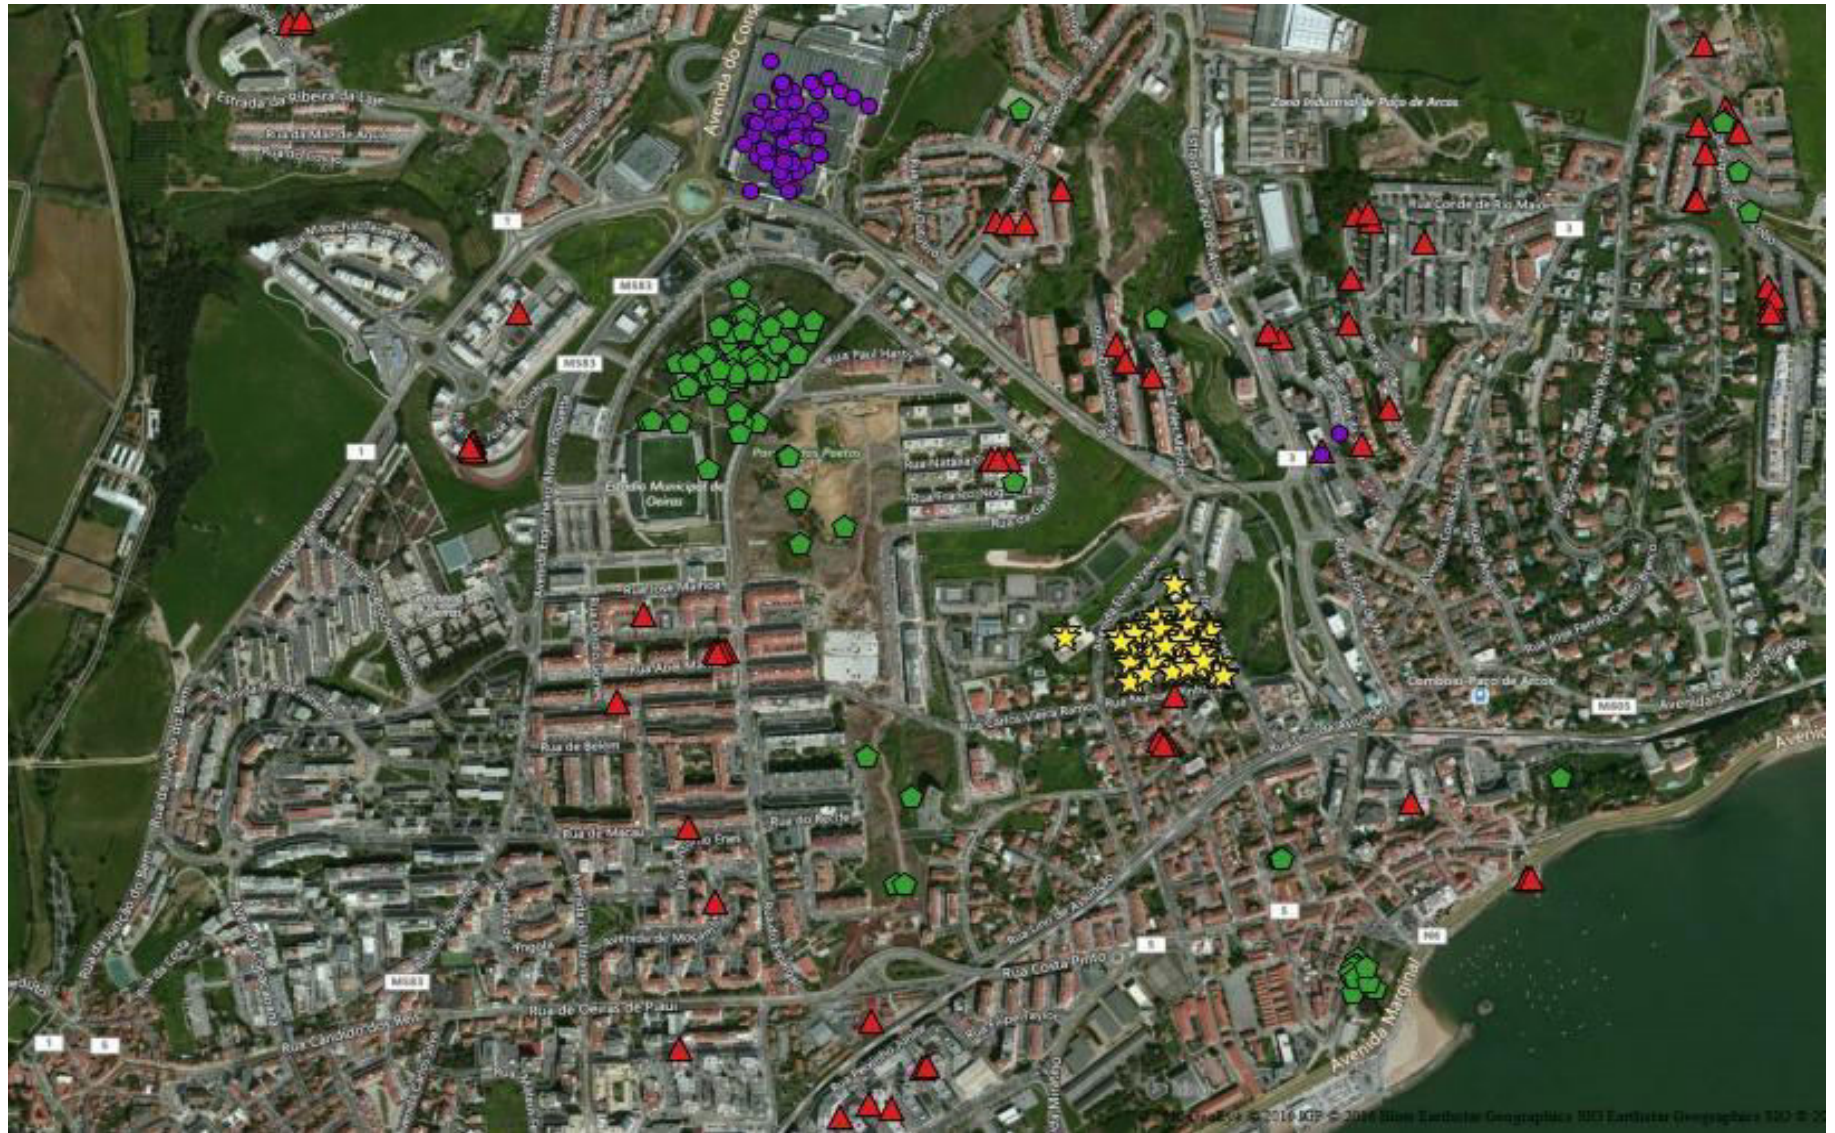

RESULTS ON MEANINGFUL PLACE AFFORDANCES

ACTUALIZED VS. IDEALLY PERCEIVED CHILD-LED FUNCTIONAL AND LEISURE AFFORDANCES

➤ Ideally children would like for the majority of play and leisure to be child-led.

(Article 31º, CRC)

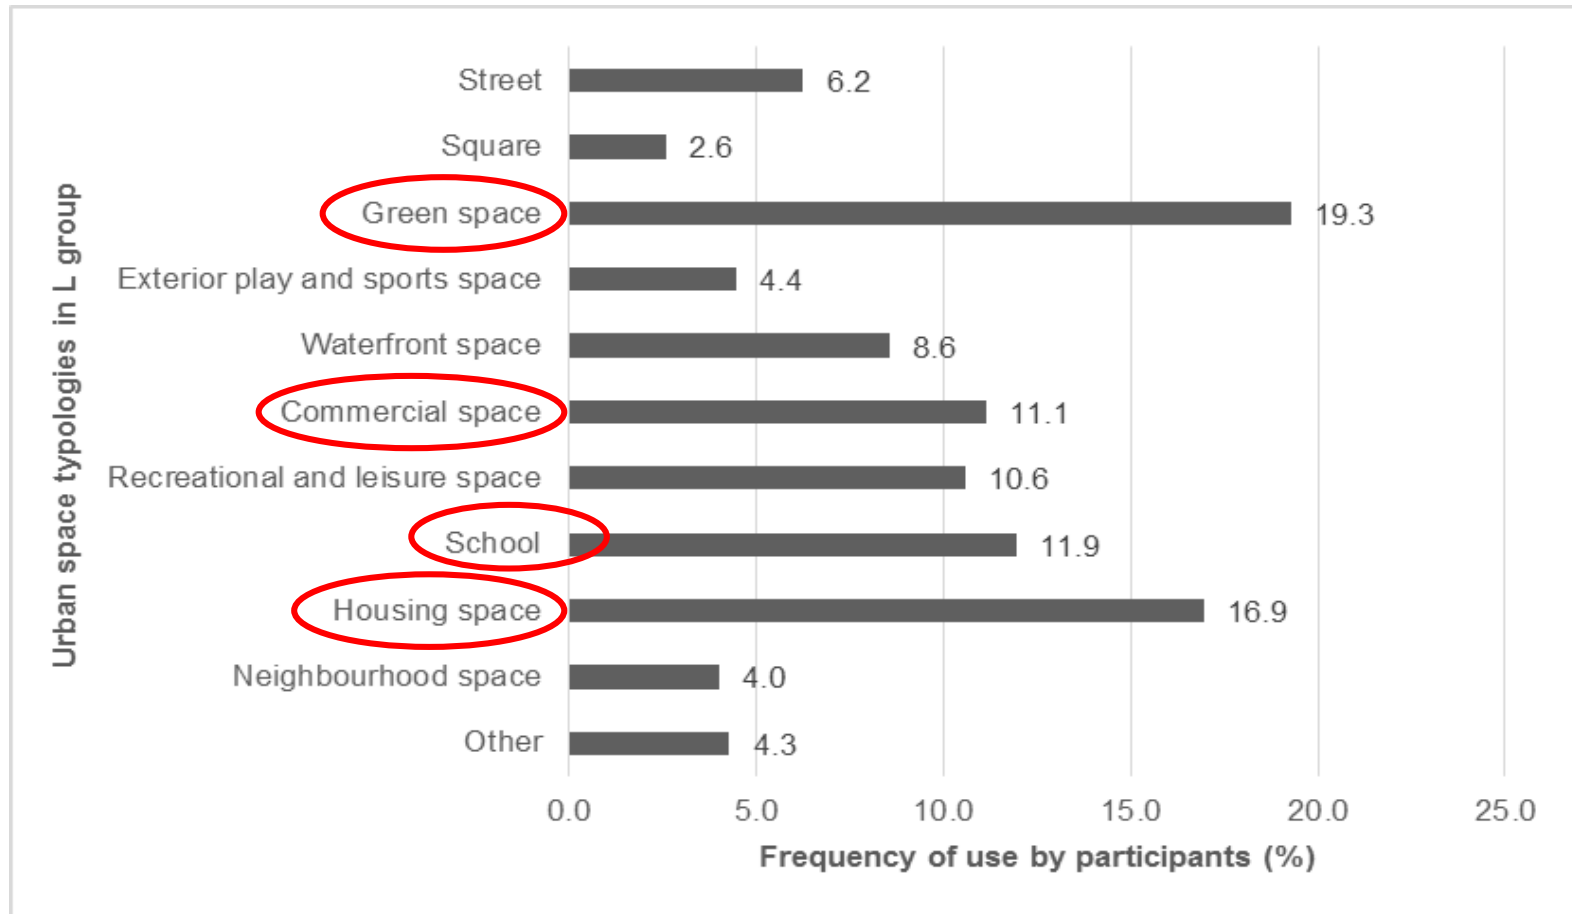

Example of actualized affordances in different urban space typologies in LBS group:
housing space (red symbols); green space (green symbols); commercial space (purple symbols); school space (yellow symbols)

Example of social affordances expressivity in different urban space typologies in LH group:
 social affordances (blue symbols); housing space (red symbols); green space (green symbols);
 school space (yellow symbols)

RESULTS ON URBAN SPACE TYPOLOGIES

URBAN SPACE TYPOLOGIES AND ACTUALIZATION OF AFFORDANCES IN L GROUP

➤ Privileged urban typologies for transactional place experiences to occur.

(Sarjala et al. , 2015)

RESULTS ON URBAN SPACE TYPOLOGIES

URBAN SPACE TYPOLOGIES AND CATEGORIES OF AFFORDANCES IN L GROUP

➤ Privileged urban typologies for social transactional place experiences to occur

⌘ (Broberg, Kyttä, et al., 2013)

RESULTS ON URBAN SPACE TYPOLOGIES

URBAN SPACE TYPOLOGIES AND CATEGORIES OF AFFORDANCES IN L GROUP

- Privileged urban typologies for functional and leisure transactional place experiences to occur.

DISCUSSION AND CONCLUSIONS

- Increase territorial range, distance travelled autonomously, when going to meaningful places.

DISCUSSION AND CONCLUSIONS

- Most expressive affordances “being with friends and being myself” and clusters of affordances in line with developmental needs of participants.
- Social meaningful places as promoters of young people’s independent and active mobility namely in the neighbourhood area.
- Play and leisure affordances are more expressive in specific outdoor and indoor settings, respectively. Thus, in city environments, both naturalized and artificialized geographies are important promoters of youth-led play and leisure interactions.

DISCUSSION AND CONCLUSIONS

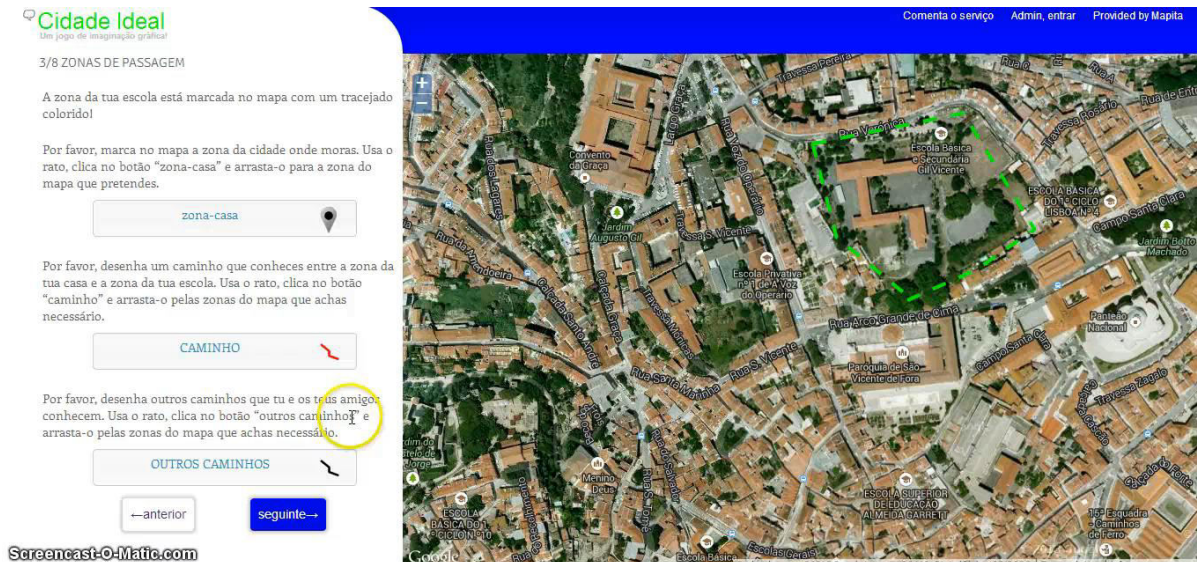

- **Green space as privileged typology for child-in-place experience.**
- **Multidimensional affordances found in each urban typology.**
- **Specific urban typologies afford a specific category of place transaction.**

DISCUSSION AND CONCLUSIONS

- “Cidade Ideal” child-friendly survey and a specific methodological design was effective in revealing and idealizing landscapes of children’s transactional behaviour.
- Include children and young people in child-friendly urban planning processes.

Thank you very much for your attention!
